Captioned Scenes Project Rubric

Key Concept	Extensive Evidence	Convincing Evidence	Limited Evidence	No Evidence
Program Development - Program Sequence	They *sequenced the program well*[1] and all elements on the screen appear as intended.	Program may contain a few incorrectly sequenced code resulting in a few elements hidden behind others unintentionally.	Program has significant sequencing errors, resulting in many elements unintentionally hidden or overlapping others	Errors in program sequencing are significant enough to keep the output from resembling the intended scene.
Modularity - Sprites and Sprite Properties	At least 2 sprites created, each with at least one property *updated after creation*[2].	At least 1 sprite created with at least one property updated after creation.	At least 1 sprite created. No properties updated after creation.	No sprites are used in the program.
Position - Elements and the Coordinate System	At least 2 shapes, 2 sprites, and 2 lines of text are placed correctly on the screen using the coordinate system..	At least 1 shape, 2 sprites, and 1 line of text are placed on the screen using the coordinate system.	A cumulative total of at least 2 elements (*one of which is text*) are placed on the screen using the coordinate system (*e.g., 1 sprite and 1 line of text or 1 shape and 1 line of text*).	Consists solely of sprites or shapes with no inclusion of text, or it lacks *any* elements (shapes, sprites, or text) positioned on the screen using the coordinate system
Creating a Digital Artifact	Elements are used as described in the project guide and clearly display a captioned scene.	Elements are generally used as described in the project guide.	Some elements are used as described in the project guide.	The project guide is not filled out or is unrelated to the program.

1. Sequenced the program well

- If the program code is not sequenced correctly, some elements, such as shapes, sprites, and text, may be unintentionally hidden behind others.
- In the specific case of sprites, if the `drawSprites()` code is not sequenced correctly, some or all sprites may not appear on the screen.

2. Updated after creation:

- Sprites are created with these two lines of code:
  ```
  var sprite = createSprite(200, 200);
  sprite.setAnimation("animation_1");
  ```
- After the above two lines, a sprite property listed below should be updated
  - rotation
  - scale
  - tint
  - alpha
  - width
  - height
