

When Your App Doesn't Work

Try these steps, in order, before you ask for help.

1

Check the **App Lab console** for an error message.

2

Check your event is attached to the correct button or element ID.

3

Check screen names match exactly everywhere they're used.

4

Undo your last change and test again — isolate what broke it.

5

Ask a partner to look with fresh eyes.

6

Ask your teacher.
