

Design Process Quick Reference

The words you'll use most, at a glance.

Empathy

Understanding what someone else needs

User

The real person a product is made for

Need

What a user requires to actually succeed

Prototype

A rough, early version made to test an idea

Iteration

Improving through repeated rounds

Feedback

Specific, useful comments on what's working

Usability

How easy something is to actually use

User Interface

The screens and buttons a person sees

Testing

Checking with real people, on purpose

Design Specification

A plan naming who and what you're designing for
